

What We Do in Our Office for Your Safety

Infection control and your safety are, and always have been, our top priority. We have always gone above and beyond recommended CDC protocols and have added other systems as well.

What We Do That Is Different to Reach a Higher Standard

- All surfaces are wiped down with a CDC and EPA approved disinfectant. Instruments are autoclaved and disposable items used where possible.
- We use **ozonated water**, an FDA-approved method, to make sure the water we use is not only clean, but acts as an antiviral, antibacterial agent. Ozonated water has a very strong ability to kill pathogens. There is ozonated water in every treatment room, and it also runs through all handpieces.
- There are medical grade air purifiers in every treatment room.
- We are taking temperatures on every patient and team member.
- Everyone must use hand sanitizers when entering the office and before leaving treatment rooms.
- A prescreen questionnaire is completed before each patient's appointment and repeated upon arrival.

- We have a highly planned scheduling system to minimize contact with other patients during your visit.
- The office is wiped down daily with 89-16 Deep Sterilization Protocol.

Together we'll make sure every patient is safe and healthy at every visit. Please let us know if you have any questions, we are always here for you.
